Priyanshu Pandey

AI and ML Engineer

Email: pandeyshreyansh0204@gmail.com | Phone: 7355240110 | Raebareli, India
LinkedIn: www.linkedin.com/in/priyanshu-pandey-8b8160287 | Indian | GitHub: github.com/Priyyanxhu

EDUCATION

United College of Engineering and Research 08/2023 - 07/2027
BTech | Computer Science and Engineering with specialization in AI and ML Prayagraj, India

SKILLS

Languages Python, Java, SQL **Backend Frameworks** Django, Spring Boot, FastAPI

AI/ML Frameworks PyTorch, TensorFlow, Keras, LangChain (AI Agents & RAG), Hugging Face & Transformers, YOLO, OpenCV, Scikit-Learn, NLTK, spaCy

Databases & Tools MySQL, Git & Github, Docker, Maven, Gradle, FastAPI, MLflow, ChromaDB

WORK EXPERIENCE

Artificial Intelligence & Machine Learning Engineer Intern | HCL Technologies

- Developed, tested, and optimized Machine Learning and Deep Learning models using Python, TensorFlow, and PyTorch, improving model inference accuracy by **62%**.
- Designed and integrated RESTful APIs using Flask/Django in machine learning models with UI.

Generative AI Intern | IBM

- Designed and implemented Generative AI solutions using LLMs and prompt engineering techniques.
- Built AI workflows for content generation, text summarization, and conversational applications.

PROJECTS

Smart Fog Vision System | *Python, OpenCV, PyTorch, YOLO, Image Processing*

- Developed an end-to-end computer vision system utilizing custom YOLOv8 architectures to enhance visibility and object tracking in low-visibility environments.
- Applied advanced Dark Channel Prior (DCP) algorithms and image processing techniques to automate fog detection, significantly improving contrast and structural clarity.
- Integrated PyTorch-driven enhancement methods to successfully isolate, segment, and improve object visibility within high-density fog datasets.

ZYNC: AI-Powered Missing Person Matching System (Chrono) | *Java, Spring Boot, MySQL, Deep Learning (Keras/TensorFlow)*
chrono-j9pf.onrender.com

- Designed and developed a socially impactful platform using FaceNet embeddings and similarity-scoring mechanisms to match missing-person reports with found records. **Live: https://chrono-j9pf.onrender.com**
- Orchestrated an intelligent multi-modal matching workflow integrating location telemetry and demographic data, utilizing Cosine Similarity to achieve **over 90% matching accuracy**.
- Engineered secure backend REST APIs using Spring Boot and optimized MySQL database indexing to handle rapid retrieval and confidential storage of sensitive records.

CERTIFICATIONS

Physics Wallah(PW): DSA using Java

Google: Machine learning

Kaggle: Deep learning & Python

Microsoft: Generative AI
